15 MAY 2026

Briefing to Students...

By Nanyang Polytechnic

POLYFINTECH 100

@POLYFINTECH100.HACKATHON

Kickoff Program.

Hackathon Format.

Team Requirements.

- 1 Students can form teams from different schools but must be of the **same polytechnic**.
- 2 Each team limits from **2 to 6 members**.
All members MUST be ACTIVE students as at the Category Final Date.
- 3 All teams go through **Preliminary Round** (mandatory) organized in respective polytechnic.
- 4 Selected teams will represent their polytechnic in the **Category Finals**.

Hackathon Categories.

- 1 There are **FIVE** confirmed categories.
- 2 Each team can make **THREE** choices of category. The organizer will “try to” assign one of the 3 categories to the team.
- 3 All Category Champions will compete in the Grand Finals in the **Singapore FinTech Festival 2026**.

Competition Stages

May - July 2026

Teams will compete in the **Preliminary Round** organized in their respective polytechnic.

Registration Deadline:
29 May 2026

5 Sep 2026

Each polytechnic will select the teams to compete in the **Category Finals** in September held at **Nanyang Polytechnic**.

18 Nov 2026

The champions of each category will come together to compete to be the **Grand Champion** at the Grand Finals during the **Singapore FinTech Festival** in November.

ESG

Sponsor Brief.

ESG Momentum Engine 2.0

Reinventing ESG Investing in the AI Era

From static scores to dynamic intelligence

**BUILD THE FUTURE
OF INVESTING**

Are we investing in the wrong companies?

What if the market is rewarding companies for what they were...
instead of what they are becoming?

ESG drives real investment decisions

\$35T+

Assets under ESG mandates globally

1 in 3

Investment dollars flows through ESG filters

ASEAN

52 index companies consistently improving ESG

Why ESG matters

Capital allocation

ESG scores shape where trillions of dollars flow across global markets

Portfolio strategy

Institutions use ESG to screen, weight, and benchmark long-term holdings

Risk management

ESG flags hidden risks — governance failures, regulatory exposure, social backlash

But ESG is broken.

It tells you who was good - not who is becoming great.

STATIC

ESG scores look backwards. Annual reports, lagging disclosures, historical data.

SLOW

AI adoption, digital transformation, and new business models are invisible to current frameworks.

INCONSISTENT

MSCI, Sustainalytics, Bloomberg - same company, wildly different scores. The signal is noisy.

This creates a blind spot.

When ESG frameworks can't capture what's changing, capital flows in the wrong direction.

Future winners may be overlooked and underpriced

Capital flows to yesterday's leaders, not tomorrow's

Innovation - AI adoption, digital transformation - goes unpriced

Investors making decisions based on incomplete signals

28.9%

1-year outperform probability

46.2%

3-year outperform probability

61.5%

5-year outperform probability

*ESG improves outperform over time
- but only if you can find them early.*

Change matters more than score.

ESG improvers outperform

Companies improving their ESG trajectories consistently beat the benchmark over a 3–5 year horizon, even if their current score is low.

Momentum reveals transition

ESG momentum captures what's happening inside the company before it shows up in the price. It's an early signal of quality in transition.

The opportunity is not in ESG leaders - but in ESG improvers.

The ESG Momentum Matrix

Traditional ESG only asks: what is your score today? Momentum ESG asks: where are you going?

ESG Momentum 2.0:

a proven foundation - and an open frontier.

✓ What exists

- 52 ASEAN companies with consistent ESG improvement (2019-2023)
- ESG score 5-year CAGR as the momentum signal
- Basket returned 55.1% vs 6.4% for MSCI ASEAN benchmark
- Sharpe ratio 0.57 vs - 0.22 for the index
- Three-filter model to identify 17 high-conviction picks

→ What's missing

- AI adoption and digital transformation - not captured
- Alternative data: news, sentiment, patents, job postings
- Real-time signals vs annual report lag
- Scoring inconsistency across data providers
- Intangible assets: data moats, platform dominance, digital risk

THE CHALLENGE

Build the next generation of ESG intelligence.

Using AI, rethink how ESG should work in today's world.

Predict earlier

Use AI and alternative data to identify ESG momentum before it shows up in annual disclosures.

New data sources

News sentiment, patent filings, job postings, satellite data - explore signals beyond official reports.

Redesign scoring

Challenge the current framework. Build a model that captures AI risk, digital maturity, and intangible assets.

Make it usable

Build a dashboard, ranking system, or investment signal that an investor can actually act on.

What will stand out.

Not about complexity - about impact.

01 Solves a real investor problem

The insight must be actionable. If a fund manager can't use it Monday morning, rethink.

02 Simple and clear output

A dashboard, signal, ranking, or recommendation. Not just analysis - a decision tool.

03 Generates meaningful insights

Show us something the market doesn't know yet. That's the entire point.

04 Original thinking

Challenge assumptions. A creative reframe of the problem is worth more than a polished replica.

05 Practical and buildable

Proof of concept beats presentation. Show the idea working, even on sample data.

Don't measure ESG. Redefine it.

The future of investing belongs to those who can
understand change before the market does.

Show us what the next generation of ESG intelligence looks like.

A woman with dark hair tied in a bun, wearing a bright yellow hoodie, is laughing and holding her hands behind her head. She is standing in front of a city skyline with tall buildings. The scene is brightly lit, suggesting a sunny day.

NETS

PolyFintech100 API Hackathon 2026

NETS CATEGORY

Empowering Merchants, Accelerating Business Growth

NETS at a glance

Est 45,000
merchants

130,000+
acceptance points

Over \$26billion
in annual retail payments

Access to approximately **10 MILLION NETS Cardholders** across major banks

6.6 MILLION ACTIVE CARD USERS

**NETS POS
TERMINALS**

**UNIFIED POS
TERMINALS**

**QR ACCEPTANCE
POINTS**

**IN-APP MOBILE/
WEB PAYMENT**

Problem Statement

With the growing adoption of e-wallets for both local and cross-border payments, can we redefine the NETS App to become the preferred payment companion for Gen Z & Millennial users — not just for transactions, but for everyday experiences?

Challenge

- With Gen Z and Millennials increasing living, shopping, travelling, and socializing through digital platforms, how can we deliver beyond payments in Singapore and Overseas?

- Competing apps dominate with broad partnerships and personalization. How do we create the ecosystem for users locally and abroad?

- What are some of the potential use cases and functionalities for users to choose NETS over other payment options both locally and abroad?

Solution

- Participants are challenged to design innovative features or value-added services that could enhance user engagement through personalization, rewards, or social payment experiences for local spends and overseas adventures.
- The goal is to position NETS as the go-to Digital-First Lifestyle app, seeking convenience, connection, and confidence when managing their money — anywhere they go.

Intelligent Banking.

**Sponsor
Brief.**

For now,
and beyond

How can **OCBC** leverage autonomous, decision-making AI across customer journeys to clearly differentiate itself and emerge as the market leader?

You are defining **what makes OCBC unmistakably different when AI becomes an active partner in banking, not just a background tool.**

OCBC operates in a highly competitive market where products and digital services are increasingly similar, while customer expectations for simplicity, personalisation, and trusted advice continue to rise.

To truly stand out, OCBC must go beyond being digital and become meaningfully better at understanding customers and delivering value at scale - by anticipating needs and acting proactively on behalf of customers and employees.

You are not designing a new feature or marketing message.

- How AI agents could proactively **anticipate customer needs**, surface advice, or initiate actions and personalise experiences continuously, not just at onboarding or campaigns
- How OCBC could use AI agents to deliver **better advice, faster decisions, and greater trust**, while keeping humans in control
- How this approach would feel meaningfully different to customers compared to typical “digital banking apps”
- Propose a viable product/ service concept that shows how OCBC can do so differently

For **now**,
and **beyond**

PolyFinTech API100 Hackathon 2026 – Prudential

Our Problem Statement

How might we design an **agentic AI “Insurance Navigator”** that helps people understand and compare insurance coverage by simplifying policy language, asking thoughtful questions, and supporting financial representatives in recommending suitable options to the customer?

Context to the problem statement

Across the industry, insurance policy documents are often long and complex. This complexity can create uncertainty for consumers, and they may potentially find it difficult to compare between the plans in search of the most appropriate one for their needs.

Financial Representatives play a vital role in providing advice and recommendations, aiding customers by offering clarity. The **'Insurance Navigator'** should be designed to empower Financial Representatives to better support and serve their clients.

POLYFINTECH100 API HACKATHON 2026

UX/CX CATEGORY

Build An AI Copilot That Transforms Customer Conversations

Design a compliant, real-time assistant that helps client-facing representatives explain insurance concepts and products clearly.

Are you ready to hack the future of insurance?

Sponsored by

**Singapore College
of Insurance**

Meet your Sponsor: Singapore College of Insurance

- **50+ years strong:** founded in 1974 and trusted across Asia
- **Mission:** grow the next generation of insurance and financial services talent – that's you!
- **Award-winning:** Asia Insurance Educational Service Provider of the Year, 7 times
- **AI-ready:** Pioneering AI Essentials courses and tools to reimagine insurance workflows and futurize the industry and workforce
- **Why It Matters:** SCl connects you to a massive sector network and real career paths

For students: this is a chance to solve a real industry problem, with visibility to industry leaders.

Why This Matters Right Now

Scale

Soaring gross written premiums —Insurance is a major sector in Singapore

Complexity

Client facing representatives juggle different insurance plans, Shield Plans, ILPs, riders, and exclusions daily

Trust

Customers expect clarity, fast and personalised advice across every channel – chat, video, in-person

Rules

AI risk management is critical - MAS AI Risk Management guidelines (2025) are reshaping how the industry operates

- AI is already changing sales, service and operations
- Client facing representatives need tools that improve consistency without slowing conversations
- Students who can combine tech, UX and governance will stand out

The Problem You Will Solve

Client-facing representatives need to explain complex products accurately, consistently and clearly while the customer conversation is happening – and that's where YOU come in!

Need solution to help tackle the following challenges:

- Mixed messages on product features and next steps
- Inconsistent service quality across channels
- Compliance gaps that can damage trust and reputation
- Customers lose confidence in the financial advisory process and the industry

Your role: make the right explanation easier to find, review and use in the moment.

What Your AI Copilot Should Deliver

- **Real-time Guidance:** Smart, context-aware guidance popping up during live conversations
- **Consistent Messaging:** Approved messaging for client facing representatives which are clear and accurate
- **Compliance Checks:** Automatically flag gaps and suggest approved language
- **Customer Trust:** Through clear and professional explanations that build confidence instantly
- **Measurable impact:** Fewer errors, happier customers, better satisfaction scores

Where Your AI Copilot Will Shine

Face-to-face

Tablet or laptop prompts during in-person meetings

Virtual calls

Video or voice calls with smart on-screen guidance

Chat & messaging

WhatsApp and webchat responses drafted for human review

Design Principle:
Support client facing representatives in a fast, seamless and non-intrusive way during live interactions

Products Your AI Copilot Tool Will Support

**Life insurance**

Term, whole life and endowment; death and total permanent disability cover

Investment-linked policies

Insurance plus underlying investments; returns not guaranteed

Critical illness

Lump-sum payout for insurer-covered cancer, heart attack, stroke or other major illnesses

Integrated Shield Plans

MediShield Life plus additional private insurance component offered by a private insurer

Retirement plans

CPF LIFE and private annuities for retirement income

Your Mission: Build The AI Copilot Tool!

- Serve up real-time, accurate responses during live conversations
- Stay compliant with MAS and industry guidelines and internal standards
- Translate complex insurance jargon into layman-friendly plain English
- Work seamlessly across face-to-face and digital channels
- Learn from approved knowledge bases

Boundary: The tool must not provide advice, recommend, or sell an insurance product like a robo-adviser.

Judging Criteria.

Investment Required

How feasible and do you foresee a good future for adoption?

Originality & Creativity

How creative was the team in developing an unique/innovative solution?

Presentation

Ability to clearly articulate the desired functions, ideas and outcomes of the project.

Implementation

Ability for team to reach a conclusion on the viability of the project.

Time Frame (Time to Market)

How realistic are the timelines to bring product to market.

Needs for Target Segment

Does it create an impact to the proposed target segment?
